

## Dear Uniplay Token Holders,

We hope this letter finds you well. We are writing to inform you about an important development regarding Uniplay (UNP) tokens.

## Uniplay Migration to Midas Blockchain and MultiversX Platform

We are excited to announce the migration of Uniplay (UNP) tokens from the Ethereum ERC-20 standard to the Midas blockchain and the MultiversX platform.

### Key Changes:

- **Token Tracker and Contract Address:** The token tracker and contract address for UNP will change. UNP tokens on Ethereum, currently set at 100 billion, will be converted to Midas chain tokens with a total supply of 10 billion. This change will not impact the market cap.
- **Reduced Volatility:** The migration aims to make UNP tokens less volatile in the crypto market, providing a more stable environment for our community.
- **Listing on MultiversX Trading Platform:** UNP will be listed on the MultiversX trading platform and partner platforms at a trading range of \$0.03 - \$0.05, as opposed to the previous \$0.0033. This adjustment is intended to facilitate the token reaching \$0.1 USD within a 1 billion market cap, enhancing its desirability for trading and other utilities.

## Bridge Service for Token Swap

A bridge service will be established to facilitate the seamless transition of UNP ERC-20 tokens to UNPX Midas tokens. The exchange rate will be set at 10 UNP ERC tokens for 1 UNPX Midas token. This bridge service will be permanent, providing holders the flexibility to exchange their tokens at their convenience without any time limitations.

## Upcoming Events

Details regarding the Midas test net, main net, launchpad, and listing will be shared with the community in December. We encourage you to stay tuned for further announcements as we embark on this exciting journey.

We appreciate your ongoing support and look forward to a successful transition to the Midas blockchain and MultiverseX platform.

Thank you for being part of the Uniplay community.

**Best Regards,**
